Smart Contract Audit Report

REVOLAND

April 14th, 2022

Copyright

1. Overview

SharkTeam recently received the requirements for REVOLAND smart contracts audit. In this audit, the SharkTeam security experts communicate with REVOLAND team to conduct smart contract security audit under controllable operation, so as to avoid any risk in the audit process as far as possible.

Project Overview:

Project Name	REVOLAND
Description	NFT, GameFi
Language	Solidity
Codebase	Private Repo
MD5	F3CF7429E44D5EA2DBBD95072D7A76D8

Audit method:

Firstly, through static analysis, dynamic analysis and other analysis technologies, the smart contracts in the project were automatically scanned and manually reviewed; after that, the SharkTeam security experts conducted a detailed manual audit of the smart contracts line-by-line. From the four dimensions of high-level language, virtual machine, blockchain, and business logic, nearly 200 audit items of smart contracts have been comprehensively audited.

Audit Scope:

Contract Files	MD5
/nft/HeroPresalse.sol	476bae9e597d6ec0097eaedd0de62a95
/nft/HeroPresalseByUsdt.sol	3519dfce02d41d7afbd93d6636dec27f
/nft/PetBox.sol	c0edac416cff78aceb0fe1488d9c23cb
/nft/PetBreed.sol	d486e5999af4cfcdc0ce0c15e516e540
/nft/PetNFT.sol	9cfb67222a7a6775e37c7bc58ef8eb46
/nft/PetNftProtect.sol	a1b0262d37fb830edcf4e30a01c534fa
/nft/PetPresale.sol	0cf420009438350176831c8653b5c05c
/nft/PetPresaleByUsdt.sol	415f1180d8aeb20c0498c3e25e842afb
/nft/PetTool.sol	86c939c7a38e57e499cd73d438b2e174
/nft/SkinPresale.sol	d91cabef022d34a619d459653c5683a8

/token/LandToken.sol	708d919ba3f771731bfc9ef870c40acb
/token/PetTokenExchange.sol	ca024fd8d6e51d9f86d14e4bc28633b0
/token/PetTokenProtect.sol	b049704ee480c9841261b2b0c06b9c83
/token/RaveToken.sol	597bb59db4d73e52c22541ec93f8ae62
/token/RevoPreSaleToken.sol	e9a4c2fb3ec26b341fce91a00c9bf006
/PetMarket.sol	324ca0d7527870339a6c6ca7a7094e9b

Audit results:

The REVOLAND smart contract audit results: **Pass**.

2. Findings

2.1 Summary

Vulnerability list:

ID	Item	Severity	Category	Status
1	Check-Logic-Error	High	Business	Resolved
2	Missing-Whitelist-Logic	High	Business	Resolved
3	Missing-Token-minting-and-burning	High	Business	Resolved
4	Token-minting-and-burning-Error	High	Business	Resolved
5	Missing-Parameter-Validation	Medium	Language	Resolved
6	missing-Logic-Check	Low	Language	Resolved
7	Unused-Functions	Info	Language	Resolved
8	Unused-Interfaces	Info	Language	Resolved
9	Unused-Modifiers	Info	Language	Resolved
10	Unused-Parameters	Info	Language	Unresolved
11	Missing-Events-Arithmetic	Info	Language	Unresolved
12	Centralization-Risk	Info	Business	Unresolved

2.2 Detailed Results

2.2.1 Unused-Parameters [Info]

Description:

There are parameters of uint type in the function that are not used, which does not affect the security of the contract.

Recommendation:

It is recommended to remove unused parameters.

2.2.2 Missing-Events-Arithmetic [Info]

Description:

Some key state variables lack event events when they are modified. Therefore, it is difficult to track the off-chain changes of state variables based on the triggered events, which has no impact on the security of the on-chain contract.

Recommendation:

Trigger events when modifying some key state variables, or use other methods to track off-chain changes of state variables.

2.2.3 Centralization-Risk [Info]

Description:

The owner is a centralized high-authority account. Once its private key is lost or stolen, it will seriously threaten the security of the entire project. Since only the owner account can mint and burn the tokens in the project, once the private key of

the owner account is lost or stolen, the entire project will suffer a financially devastating loss.

Recommendation:

Properly keep the private key of the owner account to ensure the security of the account. Strengthen the security construction of account private key management facilities, improve its security, and ensure that private keys will not be lost, leaked or stolen as much as possible.

Appendix A: Smart Contract Audit Items

ID	Item	Category	Severity
TVE-001	Different-Pragma-Directives-Are-Used	Language	Info
TVE-002	Incorrect-Versions-Of-Solidity	Language	Info
TVE-003	Solidity-Version-Is-Outdated	Language	Info

Appendix B: Vulnerability Severity Classification

The nature of vulnerabilities is unintentional and unexpected security flaws or risks, which can be divided into four threat levels: High, Medium, Low and Info. The classification is mainly based on the impact, likelihood of utilization and other factors.

The impact is defined mainly according to the three dimensions of confidentiality, integrity and availability;

The likelihood of utilization is defined mainly according to three dimensions: attack vector, attack complexity and authentication.

Impact / Likelihood	critical	high	medium	low
low	High	High	Medium	Low
medium	High	Medium	Low	Low
high	Medium	Low	Low	Info
Ex-high	Low	Low	Info	Info

SharkTeam has tried the best to ensure the accuracy and reliability of the content when writing this report, but SharkTeam will not be responsible for the loss and damage caused by the omission, inaccuracy or error in this report. The safety audit analysis and other contents of this report are based on the materials provided by the project team. This audit only focuses on the audit items provided in this report, and other unknown security vulnerabilities are not within the scope of this audit. SharkTeam cannot determine the security status of facts that appear or exist after the report. SharkTeam is not responsible for the background or other circumstances of the project.

The content, services and any resources involved in this report cannot be used as the basis for any form of investment, taxation, law, and supervision, and there is no relevant responsibility.

About SharkTeam

SharkTeam, a leading blockchain security service team, offers smart contract audit services for developers. To satisfy the demands of different clients, the smart contract audit services provide both manual auditing and automated auditing. It implements almost 200 auditing contents that cover four aspects: high-level language layer, virtual machine layer, blockchain layer, and business logic layer, ensuring that smart contracts are completely guaranteed and Safety.

SharkTeam composes of members with many years of cyber security experiences, proficient in the underlying theories of blockchain and smart contracts, and we also provide comprehensive services including threat modeling, smart contract auditing, emergency response, etc.
